SUMMARY

Senior software engineer with 4+ years of experience, specialising in Flutter mobile apps and embedded Linux systems. Sole engineer behind a consumer payments app and a custom Raspberry Pi kiosk OS running on about 500 vending machines nationwide. Also builds backend services in FastAPI and Rust, and LLM-powered products using RAG and multi-agent pipelines.

EXPERIENCE

Senior Software Engineer 2024 – Present
Modaam *Tehran, Iran (on-site)*

- Sole engineer of the Modaam Flutter app (iOS & Android) for paying at smart vending machines, buying charge packages and tracking orders; used by thousands of users across all provinces of Iran.
- Designed and built a custom kiosk OS (Raspberry Pi + Flutter) for about 500 snack vending machines (about 10,000 daily interactions), covering product dispensing, payments and a merchant settings panel.
- Built an over-the-air update system in Rust (statically linked ARM64 binaries via cross-compilation) to ship releases to the entire machine fleet.
- Hardened and tuned embedded Linux (systemd, kiosk lockdown, remote support) for 24/7 operation; diagnosed field issues including undervoltage crashes, memory leaks and display race conditions.
- Created AXIOM, a custom Flutter design system shared by the kiosk UI and the admin panel (Persian RTL); packaged the FastAPI backend as an ARM64 binary via Docker cross-compilation.
- Owned architecture, testing and deployment end to end, with no QA team.

Software Developer (Frontend) Feb 2024 – May 2025
Hotiday *Remote*

- Built blog, profile, wallet and dashboard modules (Next.js, Tailwind CSS) from Figma designs on a Django REST API; improved SEO and page performance; delivered a reusable component library.

Full-Stack Developer Mar 2024 – Jun 2024
Sazmanyar *Tehran, Iran*

- Built a warehouse management system from scratch (.NET Core, React, SQL Server) with role-based access control and real-time inventory tracking; adopted by multiple businesses across Iran.

Full-Stack Developer Jun 2022 – Mar 2024
Arvin Rayan System *Tehran, Iran*

- Developed and modernised ERP modules (.NET Core, React, Entity Framework); migrated a legacy jQuery / .NET Framework codebase to a modern, scalable architecture.
- Joined client meetings; led backend and frontend tooling upgrades.

PROJECTS

Pettaio – AI Pet Assistant App | Flutter, FastAPI, LangGraph, Chroma, YOLO 2024 – Present

- Built the full stack solo (Flutter with clean architecture; FastAPI backend); co-founders handle business.
- Multi-agent pipeline (safety check → router → parallel specialists → synthesis) with SSE streaming chat and long-term pet memory.
- RAG with Chroma and cross-encoder reranking, an LLM-as-judge evaluation harness, and a custom-trained YOLO model for pet behaviour analysis; CI/CD to a Hetzner VPS (Docker Compose, Nginx, GitHub Actions).

Tenkai – Journal & Fitness App | Flutter, Drift, Rust, Axum, PostgreSQL Personal project

- iOS app with voice journaling, book tracker and workout logging (hooks_riverpod, Drift).
- Rust backend (Axum, Diesel, PostgreSQL) with JWT auth; automated build and deploy via GitHub Actions to GHCR.

EDUCATION

B.Eng. Computer Engineering (Software) Sep 2020 – Sep 2025
Iran University of Science and Technology (IUST) *Tehran, Iran*

- Thesis: frontend of TaVAN, a smart labelling system for Persian documents built for a real industry client.

SKILLS

Mobile	Flutter, Dart, BLoC, Riverpod, GoRouter, Drift, Clean Architecture
Embedded	Raspberry Pi, embedded Linux, systemd, Rust, OTA updates, Docker cross-compilation
Backend & Web	Python, FastAPI, Rust (Axum, Diesel), PostgreSQL, SQLite, Django, .NET Core, Next.js, React
AI / ML	LLM apps (OpenAI, Gemini), RAG, LangGraph, PydanticAI, Chroma, YOLO, HuggingFace
DevOps & Tools	Docker, GitHub Actions, Nginx, GHCR, AWS, Git, Pytest, Figma
Languages	Persian (native), Kurdish (native), English (fluent, professional)
